High Performance Medical/Industrial Compounder Opens Doors in Leominster, MA

Team of plastics industry veterans opens a state of the art custom medical/industrial compounding and toll processing company.

LEOMINSTER, Mass – Specialty medical/industrial compounding and tolling company, Peak Performance Compounding, Inc, (www.peak-pci.com) opened January 2, 2019. The company will create approximately 35 job opportunities for the Central MA area in the next few years.

With a combined 100+ years of industry experience, owners Todd Marchand, Robert Tocci Jr., Michael Carota and Jonas Angus launched the company to offer a service-oriented option for pre-colored high quality, specialty, and industrial engineered plastics compounding needs.

“Peak Performance Compounding, Inc. believes in treating customers with integrity and best in class service; prioritized with reasonable lead time and uncompromised quality” – Peak Performance Compounding President, Todd Marchand.

Peak offers twin screw technology that allows for processing difficult thermoplastic materials, highly filled products, and precision compounds. With offerings such as custom formulating, capabilities for custom coloring, and Radiopaque applications, Peak brings unique offerings to the plastics marketplace.

In addition to twin screw compounding, Peak also offers pellet blending, pellet pulverizing, and powder blending at its humidity and temperature controlled facility in Leominster, MA – the Pioneer Plastics City of America.

Marchand sees high growth potential for Peak, as it will be filling a need for custom medical and industrial tolling and compounding, with a strong focus on its customer’s needs. “We view our relationship with our customers as a partnership; our partners know that we care about their products and businesses as if it were our own.”

This operation will also fill the gap that will be created by the recently announced shut down of the old ECM/A. Schulman compounding plant in Worcester by Lyondell Basell.
